Abstract (en)

The present invention relates to a device for joining elements forming jeweller articles, such as precious metals and pearls, which device comprises: a pair of pin arranged at respective cross sections of a metal half-ring shaped link, made of a precious material; a pair of opposite holes arranged on the outer surface of a pearl so that the pair of pins can be housed in the holes to form a coupling element between the pearl and the metal ring-shaped link. <IMAGE>
