Abstract (en)

[origin: EP0997242A1] Rotating knives (1) make the initial cut in the tube. Each knife is mounted on a pivoting cutter carrier lever (2) activated by an actuator (3), the assembly being arranged on a cutter carrier carriage (4) able to move transversely to a cutting mandrel (5) carrying the tube. A final cut through the remaining thickness is made with rotational locking of the cutters.
