Abstract (en)

[origin: EP0997355A1] The motor vehicle seat back lining (3) comprises an annular band (7) fixed to the periphery of a lateral cut-out in the lining. Openings (8) allow the passage of projections (9) integral with the air bag module to ensure the positioning of the band in relation to the module and to hold the lining around the module projecting parts. A removable cover ring (10) is fixed to the protection module for the band and projections.
