Abstract (en)

[origin: EP0997416A1] Front end of paper length (4) is passed over a drum (3) in front of the reel-spool (5,7). Before being placed on the reel-spool, the front end is kept separate of it by blown air. The air is applied against the movement direction (VII) of the paper, to the empty reel-spool (7) on the drum and/or the reel-spool (5) pressed against the drum, downstream of the contact line (A) between drum and spool. The blown air supply is switched-on automatically, and is applied at a distance to the reel-spool, which is adjusted dependent upon a distance sensor (11).
