Abstract (en)
[origin: WO9958237A1] The present invention relates to a system for continuously carrying out homogenously catalysed chemical reactions, comprising a reactor (1) with at least one and preferably two feed lines (2, 3) for reactants, solvents and a catalyst, in addition to at least one outlet (4) for a reaction product or products. The invention is characterised by a device for continuously carrying out annular chromatography (CAC) (7) which is connected to the reactor by means of bypass lines (5, 6).
