Abstract (en)
[origin: EP0998865A2] The locking mechanism has a bolt (8) which is attached rotatably inside the outer contour of the rail (13) on the carcass side. An operating element is formed as a flat slider and is mounted movably in the guide rail (11) on the drawer side. The slider has operating faces set inclined to its direction of movement to engage with the bolt. Preferred Features: The slider lies on the inner face of the drawer guide rail and has at least two continuous oblong holding recesses guiding engagement with raised parts on the inner face.
