Abstract (en)
[origin: EP0999018A2] The cutter machine has a conveyor system (1) for stacks of material to be cut. One stop (15) is positioned on the conveyor at right angles to the conveying plane and is adjustable at an angle to the un-stacking roller. The conveyor has a sensor to regulate advance of the conveyor system. The first and a second stop at right angles to it are pivoted about a common axis, and have a common drive for a turning or a linear movement.
