Abstract (en)

[origin: EP0999111A1] The stop has a transverse stop shaped sector which acts with a cam track on the limiting stop (2) and a support roll (4) to limit the transverse deviation of the wagon box (1) relative to the bogie (3). To limit not only the transverse play between the bogie and the wagon box, but also the rotation of the bogie relative to the wagon box, there is also a shaped sector for this purpose.
