Abstract (en)
[origin: EP0999166A1] The roll bearing unit is part of a machine in which copies separated from a material web are forwarded by transporter belt strings and including a second longitudinal folding device. The folding roll (1) can be supported by a counter-bearing (14) round which the transporter belts (3) run. An axially traveling bearing journal is provided at one endface (12) of the roll.
