Abstract (en)
The concrete part subject of this Patent is a moulded constructive member, the configuration of which allows a right hollow prism to be composed with identical parts, suitable to configure pillars serving as a shuttering and coating. For a horizontal assembly, a notch (1) is provided close to a shod side, into which the edge (2) of the opposite shod side of another part may be slid. For a vertical assembly, extensions (3) are provided on the dorsal face which respective face recesses (4) in the long sides of two parts on superimposed layers. The front face (5) reproduces the appearance of natural or artificial materials. <IMAGE>
