Abstract (en)
[origin: DE19733033A1] One-seat motor vehicles are already known per se in the form of wheel chairs. Their wheels can be swivelled inwards or extended to enable the use of drive chains. In order to provide multiple uses of one-seat vehicles in inner city traffic, the chassis is configured in three variations, i.e. quick travel mode with a large wheelbase and a large track width; slow travel mode with a small wheelbase and a higher seat arrangement; and finally transportation mode with folded nesting wheel carrier arms. The invention is designed for urban motor vehicles.
