Abstract (en)
[origin: FR2766702A1] The invention concerns a device for separating a baby feeding bottle into sections, said feeding bottle (1) comprising a body (10) provided with a threaded neck (12) whereon is screwed an adjusting nut (40) for maintaining the nipple (30) in position. Said separating device is characterised in that it consists of a removable receptacle (20), comprising a mouth (21) on its open end, and arranged to be located in the bottle (1) neck (12) while resting on said mouth (21) on said bottle (1) neck (12). The invention is applicable to a feeding bottle (1) provided with a funnel-shaped cap (50).
