Abstract (en)
[origin: DE19644261A1] The invention relates to a transportable building with a transporting weight of less than 30 t, which can be positioned at the setting-up site on a foundation and in which exterior walls, a roof and floor slab confine a living area closed off from the surroundings. The invention provides a building that is stable and can be better transported over extended distances in that the exterior walls, the roof and the floor slab are formed from weather-proof material, that the exterior walls are of a self-supporting design and that when the building is transported the entire weight of the building weighs on the exterior walls. Furthermore, the invention specifies a method for producing such a building.
