Abstract (en)
[origin: GB2333366A] An electromagnetic flowmeter in which the electromagnet 1, 2 is substantially wholly enclosed in a non-magnetic electrically-insulating casing 13, for example moulded in plastics material, and terminals 27 outside the casing are electrically-connected through the casing to components to or from which electrical signals may be required to be supplied or received. The meter tube 10 may be integral part of the casing or included as an insert in the moulding of the casing or a separate part which closely fits the casing.
