Abstract (en)

[origin: WO9906979A1] In a self-sufficient home emergency warning system, the user needs not carry any signalling devices. A critical situation can be reported to an external receiver by voice input via microphones (1, 2, 3) linked to a communications interface (11). Moreover, a person (4) can be monitored by sensor systems (6, 7, 8) which can also establish an external connection via the communications interface (11).
