Abstract (en)
[origin: EP1000601A2] The device has a motor-driven oscillation exciter connected to an vibrator head (10). The drive shaft of the vibrator head forms an angle (α) with the drive shaft (2) of the exciter. The drive shaft is mounted in a casing (1) by ball-bearings (6) with its stub (3) in a bore (4) running in line with the drive shaft axis. The exciter engages the vibrator head in a holder part at an angle to the drive shaft axis.
