Abstract (en)
[origin: EP1000645A2] A playhouse formed from a single sheet of cardboard material comprises opposite first and second walls (2,6) and opposite third and fourth walls (4,8) extending between the first and second walls (2,6). Each of the third and fourth walls (4,8) has a respective triangular gable (38,40) extending therefrom, each gable being arranged to pivot between a vertical position, to support a pitched roof (22,24), and a horizontal position, to allow the pitched roof to be flattened. The playhouse is thus readily reconfigurable to form part of a modular system for constructing larger structures. <IMAGE>
