Abstract (en)  
[origin: EP1000712A2] The hammer drill has an activator shell forming a cavity for the air cushion in which a striker piston is moved reciprocally by a swashplate drive device. The side of the swashplate (42) diametrically opposite the activator shell has a weight body (50) which can be forced to move reciprocally by the swashplate linearly and parallel to the drill bit axis.
