Abstract (en)
[origin: EP1000713A1] The pocket tool includes at least one body element with a functional element movable out from the handle. The functional element can be turned out of the body element against the force of an elastic element (28) round a pivot (29). The elastic element lies against the stub (30) of the functional element, and these two act in a locking cam and recess combination in at least one end position.
