Abstract (en)
[origin: EP1000737A1] The printer has a rotatably driven cylindrical casing (16) mounted directly in the printer housing at both ends with protruding axle stubs (18) and a shaft (22) passing through and rotating with the cylinder casing. The rotary drive is exerted on the shaft and the cylinder casing can be applied axially to a torque transfer element (28) seated on the shaft. The torque transfer element can form a frictional coupling with an axle stub.
