Abstract (en)

[origin: EP1001069A1] The invention refers to a device designed to open doors at a distance, washing machine doors in particular, and is characterised by the fact that the force necessary to release the door hook is exerted by a spring (6) inserted between a cursor (5) and a slide (7), the latter is connected by an extension (7') to a slide (8) which carries a blade (9) that locks the door hook, the hook is released by the action of a slide (11) connected to a push-button which operates the device and when the door is in the closed position its surface (18) presses against surface (17) of slide (7). <IMAGE>
