Abstract (en)

The fluid entry device (1) has a disc (2) extending across the flow channel (34), provided with a number of perpendicular openings (19) extending between its opposite surfaces (4), communicating with respective fluid paths (15), extending parallel to the disc surfaces, via which the fluid is supplied. The disc may be provided by a pair of facing plates, with the fluid paths provided between their facing surfaces which are welded together.

Abstract (de)

Die Erfindung betrifft eine Vorrichtung (1) zur Einleitung eines Fluides (24), insbesondere Brennstoff, in einen Kanal (34), insbesondere in einen Luftkanal. Über Fluidwege (15) in einer quer zum Kanal (34) angeordneten Scheibe (2) gelangt das Fluid (24) zu senkrecht durch die Scheibe (2) führenden Öffnungen (19) und tritt dort gemeinsam mit einem durch den Kanal (34) strömenden Medium (20) aus. Es ergibt sich eine gleichmäßige Einleitung des Fluides (24) über den Kanalquerschnitt. <IMAGE>
