Abstract (en)

[origin: EP0747765A1] Disclosed is a method for processing a silver halide color photographic material, which has excellent adaptability for rapid processing and bleaching ability preferred in view of environmental conservation, comprising color developing a photographic material comprising a support having thereon at least one red-sensitive silver halide emulsion layer, at least one green-sensitive silver halide emulsion layer, at least one blue-sensitive silver halide emulsion layer and at least one light-insensitive layer, at least one of the light-sensitive silver halide emulsion layers having a silver chloride content of 50 mol% or more, and then processing the photographic material with a processing solution having bleaching ability which contains at least one ferric complex salt of the compound represented by formula (I) or (II): <CHEM> wherein R1, L1, L2, and M1 and M2 are as defined in the specification; <CHEM> wherein R21, R22, R23, R24, t, u, W, M21, M22, M23, and M24 are as defined in the specification.
