Abstract (en)
[origin: DE19825290A1] The invention relates to a respiratory device for treating sleep apnoea, comprising a compression device (11) for compressing respiratory air, a mask (2) with a cavity for the nose (3), and two lines (4, 5). One of these is an air supply line (4) connecting the compression device (11) to the cavity (3). The other is configured as an air evacuation line (5). One of the two lines is arranged at least partially inside the other line. The air evacuation line (5) is located directly on the nose cavity (3).
