Abstract (en)

[origin: WO9906583A1] The present invention relates to targeting HSV vectors, chiefly by modifying viral proteins. Thus, the present invention provides an HSV having an envelope which includes a non-native ligand. For targeting the HSV vector to a specific cell type, the non-native ligand is typically a cell-surface ligand. Additionally, for altering the native broad targeting of HSV vectors, the targeted HSV can lack a native cell-surface ligand.
