Abstract (en)
[origin: WO9911866A1] The invention concerns a device for tracing a line on the ground, comprising a handle (2) for controlling a cylindrical housing (1) in the form of a wheel, capable of rotating about its axis, said housing (1) consisting of two flanges (3a) in the form of two mutually parallel coaxial disks, with identical dimensions, the two flanges (3a) being mutually connected at their periphery by a strip (4) of constant width, provided with evenly distributed openings. The invention is characterised in that the housing (1) is mounted removable on the handle (2) by means of a fixing element of the handle (2), said fixing element axially penetrating into a sleeve (6) connecting the central circular openings of the two flanges (3a), said housing (1) containing paint and constituting an element disposable after use.
