Abstract (en)
[origin: WO9908208A1] An Internet transaction process interface for software applications residing in an object oriented client server environment which dynamically generates HTML code. Internet user requests are passed from a web server to the object oriented environment. User session management, manages and maintains web connected users via use of use TCP/IP address lists, unique session IDs and their corresponding session objects. Each session object calls upon pre-stored application forms which includes menus, controls and implicitly assigned data from the user requests. The controls are executed via a method and the output returned to the form, this is then converted to corresponding HTML strings and passed back to the web browser.
