Abstract (en)
[origin: DE19734511A1] The invention relates to a communication device, especially a multimedia telephone box comprising a camera (KAM) which records an interaction component (INTK) pertaining to a user (BEN), a display area (DB) to project an operator's station (BE), and a projector (PROJ) which is controlled by a computer (RE). The operator's station (BE) is projected onto the display area (DB) and a movement of the recorded interaction component (INTK) is converted to enable perception of a service. A microphone (MIK) is provided as an audio input unit and a loudspeaker (LAUT) acts as an audio output unit.
