Abstract (en)
[origin: FR2765062A1] The invention concerns a splitter box including a plurality of connections mutually connected by bridle cables, comprising: cable terminals (3) each of which is provided with a plurality of connection bars (29), each connection bar designed to receive one or several connector elements constituting connection points; a central hub (8); and around the central hub (8), fixing means (19) for fixing the cable terminals (3) individually, said cable terminals and fixing means being arranged such that each cable terminal connection bars (29) are arranged radially relative to the hub when this cable terminal is installed and that all the bridle cables have substantially the same length and can pass from one connection point to another by partially coiling on the hub (8).
