Abstract (en)
According to the present invention, provision is made of a vehicle for movement which comprises a seating space, front wheels and rear wheels. The front wheels are positioned in front of the seating space. The rear wheels are positioned behind the seating space. A pair of driving wheels is positioned between the front and rear wheels. The driving wheels are placed on and moved off the ground by pivoting rods about predetermined pivot points together with the driving wheels. The rods extend upwardly from the driving wheels. A driving device for driving the driving wheel is mounted on a top end of the rod. The driving device is removed from a side of the seating space by pivoting the rod about the predetermined pivot point together with the driving device. <IMAGE>
