Abstract (en)

[origin: EP1002919A1] For a window, door etc. a drive shaft fitting consists of a cover rail, behind which is a drive shaft. This locates with the cover rail in a fitting accommodation groove using a guide piece (1), which holds it longitudinally movably. The guide piece at its ends is rolled (2a,2b) and when viewed from above is S-shaped. In the central area of the guide piece are two staged sections, of which one section (4) acts as guide for the drive shaft in a longitudinal direction. An outer section (7) acts as rivet connection for the cover rail. A cover rail large locating surface (8) starts at the ends of the guide section and extends over a screw guide (10a,10b), acting as a locating and guide surface (9) for the drive shaft.
