Abstract (en)
[origin: EP1003001A2] The holding component comprises a basic part (4), to which is fixed a clamp part (5), which with its front end is connectable with at least one of the pipes via locating surfaces (6c, 7a) engaging on the pipe surface. The locating surfaces of the clamp part are formed on a connecting piece (6, 7), which is fixed to the clamp part. The locating surfaces (6c, 7a) on the one hand can also be formed on the head piece and on the other hand on a clamp bolt (7), which is releasably connected with the clamp part (5). A further arrangement can involve the locating surfaces formed on a head piece (6) and on a clamp bolt releasably connected with the clamp part.
