Abstract (en)
A starting device for inert gas-filled tubes and the like, comprising at least one first section and one second section (2, 3) for boosting the mains AC supply voltage, whose output is connected to at least one inert gas-filled tube (6) to be supplied; its particularity consists of the fact that it comprises voltage rectifier means (4) which are arranged between the supply mains and the first and second booster sections and are connected to the terminals of the at least one tube to be supplied, means (24-27) for insulating the first and second booster sections after the tube has been started being provided in order to allow a high power factor of the device. <IMAGE>
