Abstract (en)  
[origin: WO9923903A1] The present invention relates to apparel, such as clothing, footwear, fabrics, and the like, which incorporates fabrics or chemicals having a low coefficient of friction either overall or in specific areas of the apparel that will minimize the development of blisters, callouses, and irritation of the skin. The present invention also relates to apparel which incorporates fabrics or chemicals having a low coefficient of friction either overall or in specific areas of the outer surface of the apparel that will minimize frictional contact with external objects. The present invention further relates to articles defined as sports projectiles, equipment used in water activities, golf clubs, and toothbrushes, which incorporates fabrics or chemicals having a low coefficient in overall areas of the outer surface of the article that will minimize frictional contact with external objects/surfaces.
