Abstract (en)

[origin: WO9906127A1] The invention relates to a new safety binding (1) for a snowboard (3) comprising a first part (4) secured to the snowboard and a second part connected to the ski boot or snowboard boot (2). Both parts are joined to each other by means of a locking mechanism which can be released using force. The locking mechanism consists of at least two pressure springs which are arranged substantially parallel to each other and substantially parallel to the snowboard. Each spring has a bolt (21,22,28,29) which engages with a locking member (49;48).
