Abstract (en)  
[origin: DE19818200A1] The valve has a valve body (1) held by a nut and containing a valve member (11) in a boring (9) with a radially widened compression chamber (20) which has an input channel (37) running into it. The valve has a seal element (40), moved axially by the valve member stroke. The seal element shuts off the compression cavity during injection pauses and opens it during injections.
