Abstract (en)
[origin: FR2767402A1] The invention concerns a method for analysing one signal or several simultaneous signals, comprising steps which consist in converting into digital samples the successive values of the signal(s); forming in a discretized space of dimension d a scatter diagram of n dots each of which has d co-ordinates taken regularly among the successive samples of the signal(s); partitioning the space of dimension d into hypercubes; and computing the distances between the dots inside each hypercube.
