Abstract (en)

[origin: WO9966755A1] The invention relates to a method of transmitting time slots in a base station system, and a base station system. In the method (702), certain transmission powers are defined as a normal transmission power, and (704) for each time slot a transmission power to be used is determined. In accordance with the invention (706), time slots to be transmitted at a higher transmission power than normal are transmitted alternately, using at least two different transceivers in order to minimize heat build-up in the transceivers.
