Abstract (en)

A support frame comprises two elongate members (28 and 30) which have respective portions (32 and 34) which are secured together by securing means (36 and 38). Respective portions (40 and 42) of the elongate members (28 and 30) extend from the secured together portions (32 and 34) and diverge away from one another. The ends of those diverging portions (40 and 42) which are further from the secured together portions (32 and 34) are provided with loop portions (54). A further elongate part (20 or 22) of the frame extends through both loop portions (54). <IMAGE>
