Abstract (en)

An aqueous liquid is mixed by circulating through a tube (1) coiled in a figure of eight shape. The coiled tube (1) is made of copper and is positioned between two ionising plates (2 and 3) made of a mineral material containing fossilised organic material. The plates are positioned parallel with the long axis of the figure of eight. The coils may be in a single stack or split into several small stacks adjacent to each other so they fit into a confined space.

Abstract (fr)

Procédé et dispositif de brassage d'un fluide contenant de l'eau, caractérisé en ce qu'il consiste à faire circuler ledit liquide selon une trajectoire formée d'une pluralité de boucles en huit. Le dispositif comprend un tube (1) conformé en une pluralité de boucles (1c) en huit superposées. Applications au traitement de l'eau potable, à l'accélération de la fermentation d'un jus de fruit ou à l'homogénéisation d'un carburant. <IMAGE>
