Abstract (en)

[origin: EP1004832A2] The electric heater (1) for fluids comprises a heating body (2) provided with electric heating elements (3), and at least one fluid-circulation duct (10), adapted to receive heat from the heating body (2). The duct (10) is formed in an exchanger body (9), to be removably fastened to the heating body (2) in a manner adapted to transmit heat to the related duct (10). Thus the exchanger body (9) is interchangeable and can be replaced in case of clogging of the duct (10). Two exchanger bodies (9, 16) can be fastened to one and the same heating body (2), on opposite sides thereof. <IMAGE>
