Abstract (en)  
[origin: EP1005060A2] The trigger has a control lever (16) coupled to a manually operated switching crank (3), loaded by a spring (17) and pivotable from an initial position to a release position. In the initial position the control lever is pressed against a blocking pawl (7) by the spring when a trigger lever (8) is in a latched position. The control lever holds the pawl and trigger lever in this position and there is no support for the pawl and trigger lever in the release position.
