Abstract (en)

[origin: EP1005107A2] The connector has an insulating housing, at least two cable holders with first and second holding elements. The second element (12) is spring-loaded towards the first to clamp a cable end between them. An actuating element opens the holder formed by the holding elements, and a third, spring-loaded holding element (18) forms a second cable holder with the first and/or second holding element that is not opened when opening the main holder.
