Abstract (en)

[origin: WO9910611A1] The invention relates to a device (D) for walking on a roof, consisting of two fixing elements (2) which are located at a distance from one another and can be attached to the roof. In addition, the inventive device has a meshed stepping plate (1) or the like, whereby the fixing element (2) or each of the fixing elements (2) has/have a foot section (16). Said meshed stepping plate (1) can be aligned in a parallel manner with the roof pitch and can be attached in varying angle positions to the foot section (16) or the fixing elements (2). According to the invention, the device has a shape which can be easily assembled in that the meshed stepping plate (1) has two supporting ribs (5) which are situated at a distance from one another and a fixing element (2) which lies opposite the section (6) of the step.
