Abstract (en)

[origin: WO9908112A1] New methods of identifying biological agent compositions involving (a) preparing a plurality of segmented copolymers, the segmented copolymers differing in at least one of the following, i) at least one of their segment lengths, ii) chemical structure, iii) copolymer architecture; (b) preparing compositions of the segmented copolymers with a biological agent; (c) testing at least one of the compositions of segmented copolymers with a biological agent for biological properties using a cell, animal, plant or other biological model, or measurement of a chemical or physical property in a test tube, or a theoretical model; and (d) identifying the compositions with desired biological properties.
