Abstract (en)
[origin: WO9911023A2] The invention relates to a method for determining the technical address of a communication partner for a user. A directory is supplied, containing at least one respective technical address and at least one respective identification element for several potential communication partners. At least one communication partner listed in said directory is proposed according to data inputted by the user. The method is improved by supplying the directory and/or proposed communication partner according to the communicative behaviour of the user. A telecommunication device is provided with devices for implementation of said method. The invention enables the technical address of a communication partner to be determined in a flexible and efficient manner.
