Abstract (en)
[origin: EP1006073A2] The gantry crane additional equipment, particularly for transporting loads with the center of gravity outside the hook characteristic line, involves a support loop (14) off-center on the crane crab (6) which supports an additional cable (15). The other end of the cable is connected with a winch (7) via a block (18) with a load hook (19). The diameter of the cable block is determinant for the distance between the support loop and vertical hook characteristic lines (13,20).
