Abstract (en)  
[origin: EP1006255A1] End cap and mounting support combination comprising an end cap (11, 111, 211, 311, 411) disengagably engagable with a support bracket (3) and one of the end cap and the support bracket being provided with: a laterally open slot (20, 120, 220, 320, 420) for accommodating an axially extending protuberance (21) on the other of the end cap and the support bracket; and closing means to prevent the protuberance from escaping from the laterally open slot; wherein the closing means comprises a rotatable locking collar (19, 119, 219, 319, 419) surrounding the laterally open slot and having a circumferential entrance opening (23, 123, 223, 323, 423) which can be aligned with the laterally open slot by rotation of the locking collar relative to the laterally open slot from a closed position to an open position, thereby selectively providing access to the laterally open slot through the circumferential entrance opening. <IMAGE>
