Abstract (en)

A switching device includes a frame, an AC circuit switch capable of performing ON/OFF operation by holding in a locked or unlocked state a slideable operating member which is disposed inside of a first casing, a DC circuit switch mounted inside of a second casing and capable of performing ON/OFF operation in interlock with the sliding motion of the operating member, and a driving power source capable of sliding the operating member. The AC circuit switch, the DC circuit switch, and the driving power source are mounted as one unit on the frame. <IMAGE>
