Abstract (en)

[origin: FR2754696A1] The invention concerns a cooking appliance comprising an external housing (3) in which are incorporated a vessel (12), means (14) for electrically heating the vessel, and a box (23) housing a removable device (25) for condensing vapours urged to be connected on operating means (27) communicating with the vessel. The appliance comprises sensing means (65) for sensing the presence of the condensing device (25) in the box (23) and actuated by the said condensing device (25) when it is present in the box (23), and a switch (68) whose control capable of closing the power circuit supplying the heating means is dependent on the actuating of the sensing means (65).
